

## News Release

### **iMining Technologies supports Glenrose Rehabilitation Hospital Foundation launch its first ever NFT project at the Shining A Light event and in the Metaverse**

**Vancouver, British Columbia.-** iMining Technologies Inc. (TSXV: IMIN) (the "Company" or "iMining") is pleased to announce that its wholly-owned subsidiary, Metaverse Advisory Group ("MAG") has worked alongside Glenrose Rehabilitation Hospital Foundation ("Glenrose Foundation") to launch Glenrose Foundation's first ever NFT project as part of the Shining A Light event. This one-of-a-kind event will feature art and light installations that highlight the many dimensions of rehabilitation and will be showcased on June 16<sup>th</sup>, 2022 to June 19<sup>th</sup>, 2022 in Edmonton, Alberta at the EPCOR Tower.

During this event, various artwork and light installations will be on display. One of the most unique pieces on display is called "Brain Storming". Brain Storming is a beautiful art piece, created by Olivia, a 13-year-old patient at the Glenrose Hospital. Olivia created this art using the Brain Computer Interface ("BCI") technology. BCI allows Olivia and other young patients at the Glenrose Hospital the opportunity to express themselves using only their minds.

BCI works by interpreting brain signals and turning them into actions. Pediatric patients who have limited mobility or communication challenges can use BCI to interact with their environments, including playing video games, driving a remote-controlled car or creating art.

Olivia and her family have generously gifted Brain Storming, an invaluable piece of art, to the Glenrose Foundation so it can be converted into a Non-Fungible-Token ("NFT") by iMining. The artwork will be used for auction purposes to assist the Glenrose Foundation in raising the required funds so the foundation may continue to push boundaries and explore innovative ways to assist patients with mobility and communication challenges.

"We're excited to demonstrate the potential of BCI and other technologies to help reimagine human ability. With iMining's support, people around the world have the opportunity to view and purchase Olivia's artwork," says Mark Korthuis, President and CEO of the Glenrose Foundation.

Metaverse Advisory Group, a fully owned subsidiary of iMining, has been instrumental in strategizing on how the art work may be converted into an NFT. The NFT has been minted and is on showcase at the Glenrose Foundation's NFT Gallery in the Decentraland Metaverse (parcel number -43, -97) and is also

displayed on Opensea at the following address:

<https://opensea.io/assets/ethereum/0x495f947276749ce646f68ac8c248420045cb7b5e/37857005056366768101367193488388950994989182441212648303865846267028715864065>

“Non-fungible tokens help to corroborate the ownership of a unique image through the deployment of information on the blockchain. At the same time, the NFT market offers some of the best conditions for the sale and purchase of digital art today. The loss of hope is a path to nowhere. It is a pleasure and an honour to support Glenrose in this one-of-a-kind NFT project, which has become for many patients the hope for a joyful future” said Mr. Shroff the Chairman and CEO of iMining.

iMining and Glenrose Foundation continue to work closely together to create innovative opportunities to raise funds, to promote artists of the future and to find innovative ways of how technology may be used to assist patients with mobility and communication challenges.
